Multi-Channel Audio Splays

Radial Torsion™ multipair cable is made to stand up to the rigors of professional touring. Individually jacketed, shielded and numbered pairs offer exceptional performance and easy maintenance. Larger configurations feature grouped layers and because the outer jacket is extruded 'hot', the outer pairs are embed-

ded into the jacket to further reduce twisting and corkscrewing. Radial Torsion is used by broadcasters like CBC and CBS, and concert touring companies around the world.

What the pros say about Radial Torsion™...

"Radial Torsion has the dependability and ease of handling we need. We've used Radial in climates from -30°C below to 50°C above. Seven years, and over 25,000 feet later, the cable has performed without problem."

- Rick Stadnyk, Concert Systems, Solotech, Montreal. (Celine Dion, The 3 Tenors)

"We've been using Radial Torsion for 5 years with over 10,000 feet in service. We have never experienced mechanical or electrical failure. Radial is extremely pliable and the way the inner pairs are held in place, it does not twist or corkscrew."

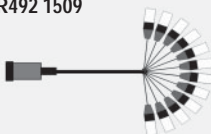

- Don Carmichael, Jason Sound - Westsun, Toronto (Bryan Adams, Sarah MacLauglan)

Main Snakes

Order #	Length
R492 1510	25ft
R492 1511	50ft
