### Radial TOS-Link Optical

#### Radial UltraLites TOS-link Cables - from 0.5 to 15 Meters:

Radial UltraLites are a high performance TOS-Link optical cable for use on S/P-DIF digital interfaces, ADAT light-pipe and DVD systems. Manufactured using the very highest purity in optical polymers, Radial optical assemblies will drive signals distances of 15 metres (50ft) without digital jitter or signal loss. Features long handle connector for easy connection.

### Radial 75 Ohm S/P-DIF Cables

S/P-DIF Sony/Phillips Digital Interface cables feature Mogami 75 Ohm cable with 100% oxygen-free copper and cross-linked polyethylene insulation for optimum signal transmission without data loss.

### Radial 110 Ohm AES/EBU

Maintaining precise 110 ohm AES/EBU specification is critical to reducing data loss due to reflection from impedance fluctuations.

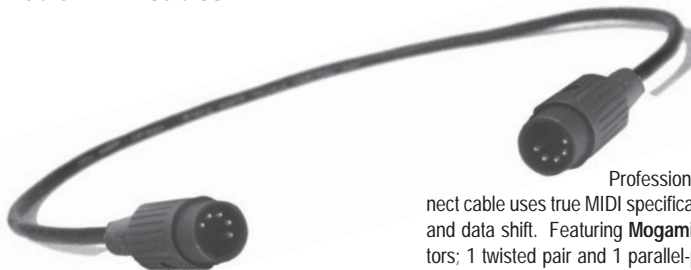

Radial AES cables feature Mogami cable and gold contact connectors for maximum shielding against stray noise. Terminated with gold pin XLR connectors.

### Radial MIDI Cables

Professional 5-pin MIDI interconnect cable uses true MIDI specification for minimal timing and data shift. Featuring Mogami cable with 4 conductors; 1 twisted pair and 1 parallel-pair, an overall shield, terminated with steel DIN connectors.

### Radial Multi-Channel 110 Ohm AES/EBU Cables

Radial digital multi-cable assemblies feature **Mogami** 110 ohm AES/EBU cable for optimum performance and exceptional flexibility for easy installs. XLR connectors with gold pins and black shell.

Note: each XLR to XLR signal path transmits two channels of digital audio.

### Radial Yamaha 02R

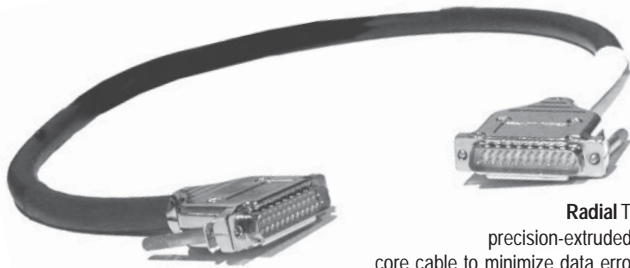

Using **Mogami** cable, Radial 8-channel AES/EBU multi-channel cable assemblies accurately maintain 110 ohm impedance throughout the length of the cable. This precision is a critical factor in reducing data errors caused by reflection, which is present in cables with less accurately extruded cores.

### Radial Tascam T-DIF

Radial T-DIF cable assemblies use precision-extruded **Mogami** 110 ohm multi-core cable to minimize data errors. A premium 25-pin D-sub with steel housing is employed for shielding against noise.

### Radial ADAT SYNC

Radial ADAT sync cable assemblies use **Mogami** 100% oxygen-free copper cable with precision extruded cores throughout for error-free performance. Long cable lengths can be employed without synchronization glitches caused by reflection or other signal degradation.
