

Order # R800 7088 00

The Cab-Link™ provides a simple and compact solution for players who have a single speaker output on their amplifier, but want to connect two cabinets simultaneously. Simply connect the amp output and both cabs to the Cab-Link with speaker cables and you're ready to rock. Two inputs are available: one for series configuration, the other for parallel. A handy guide on top of the Cab-Link allows you to choose the configuration that will match the impedance of your cabinets to your amp for optimal performance. The Cab-link also features a line out, which provides additional functionality and can be used to feed another amplifier or an effects unit.

Features

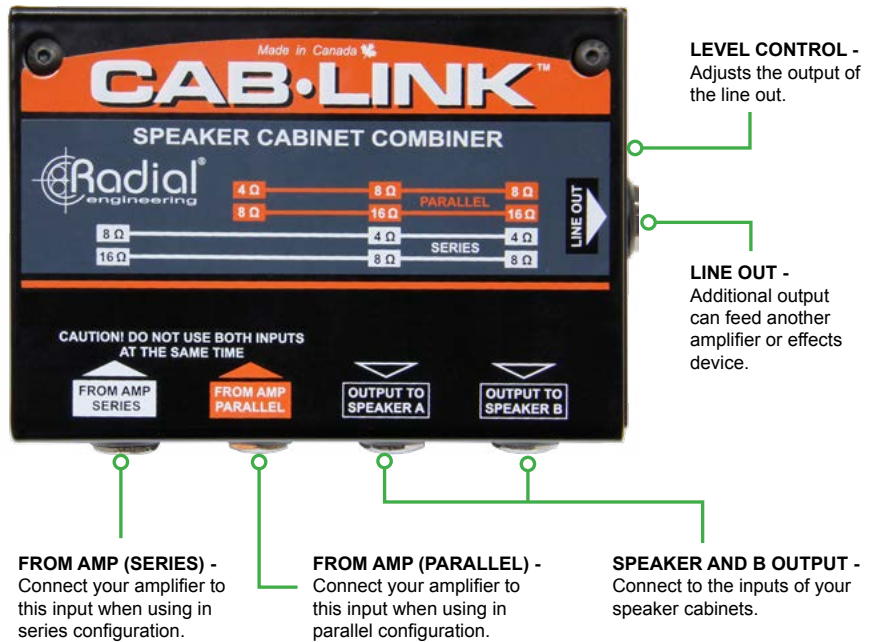

- Completely passive, no need for power
- Compact and rugged design
- Works in series or parallel configuration

Applications

- Connect two cabinets to a single amp output
- Experiment with multiple cabinets in the studio
- Makes impedance-matching easy

Cool Stuff

- Line output to feed an additional amp or EFX
- Impedance guide for easy reference
- Handles amp outputs up to 400 watts

Combine cabinets in series configuration
Connect two 8 Ohm speaker cabinets in series to use with a 16 Ohm amplifier output.

Combine cabinets in parallel configuration
Connect two 8 Ohm speaker cabinets in parallel and run both from a single 4 Ohm output on your amplifier.

Use the line out to feed another amplifier
Run a second amplifier from the line out for a wet/dry setup. Fine tune the output with the level control.
