

Mix-Blender - Order # R800 7207 00

The Mix-Blender™ is a unique multi-function pedal for bass, guitar and keyboards. It features two class-A buffered inputs with individual level controls that let you combine the incoming signals and MIX them together to one output. This could be used for two pickups on an acoustic guitar, mixing two pedals in parallel such as a chorus and a phase shifter or even combining two different instruments on stage for quick changeovers. The BLENDER section features a pair of SEND and RECEIVE jacks with a BLEND control that lets the user send the instrument signal to an effect, and then blend it back into the signal path without sacrificing the original sound. Think of adding a touch of distortion to a bass guitar or acoustic guitar to give them more shimmer in a mix without affecting the fundamentals. The award-winning Radial class-A buffers allow the signal to be driven longer without noise or artifact.

Features

- Dual inputs with individual level controls
- Class-A input and signal driving buffers
- Parallel effects loop with wet-dry blend
- Powered by 9V

Benefits

- Lets you mix two signals together with one output
- Lets you blend in effects while retaining natural tone of the instrument
- 180° polarity reverse solves effects being out of phase
- Class-A buffer allows longer cable runs without noise

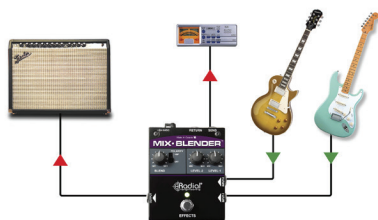

Cool stuff

- Opens door to creating subtle or unique effects
- Will not mess with your bass tone!
- Can use the Send with a tuner for quiet on stage tuning
- Works on just about any instrument!

Two instruments in one amp

With two inputs you can connect two instruments and have them play at the same volume through your amp for quick changes on stage. Connect your tuner from the send jack to monitor your tuning on the fly.

Blend both pickups together

Combining two pickups can often lead to the most natural sounding acoustic. Use the Mix-Blender to precisely mix the two signals together. Add a chorus pedal to the effects loop and control it with the footswitch.

Bass guitar with overdrive

Add overdrive or distortion to your bass without losing the powerful bottom end. The Mix-Blender's wet-dry control lets you mix in the perfect amount of distortion to your signal path.
